

Improperly removed asbestos from home renovation project.

What should I do with asbestos in my home?

Many homeowners have asbestos-containing materials in their homes. Although not required by the state, homeowners should have an inspection performed by a qualified asbestos inspector to properly identify these materials. Any asbestos-containing material that is in good condition and will not be disturbed should be left alone.

If these materials are deteriorating, or will be disturbed during renovation or demolition, they must be removed. Homeowners in single family, owner-occupied homes who do the work themselves are exempt from the state inspection and notification requirements, provided they will not be selling the home within six months. However, homeowners are required to package and dispose of the waste materials properly. Homeowners should use extreme caution when dealing with asbestos-containing materials, and should consider using a licensed asbestos abatement contractor for most removal projects.

Renovation, Demolition & Asbestos

What Building Owners & Contractors in New Hampshire Should Know

Damaged asbestos pipe insulation.

2011

N.H. Department of Environmental Services

What is asbestos?

Asbestos is the common name for a group of naturally occurring mineral fibers that are known for their high tensile strength and thermal insulating properties. It is commonly found in a variety of building construction materials and products. Examples include:

- Heating system insulation
- Spray-applied insulation
- Vinyl floor tiles
- Vinyl sheet flooring
- Ceiling tiles
- Adhesives and construction mastics
- Roofing paper and shingles
- Cement siding shingles
- Plaster and joint compound
- Vermiculite

Vermiculite insulation found in an attic.

Why is asbestos a problem?

When asbestos is disturbed, it can break down into microscopic fibers that may become airborne. Once airborne, these fibers can be inhaled and trapped in the lungs, posing a health threat. Breathing asbestos can cause respiratory diseases including asbestosis, lung cancer, and mesothelioma, a fatal cancer of the chest cavity lining.

How should asbestos be managed to minimize health risks?

The greatest potential for exposure to asbestos fibers now occurs when asbestos-containing building materials are disturbed during either building renovations or demolitions. All building owners – residential and commercial – should be aware of what steps should be taken to properly identify and address asbestos hazards in structures prior to beginning any work that might disturb asbestos-containing materials.

What are the requirements for building renovation and demolition projects?

Inspection

A thorough inspection must be conducted for the presence of asbestos-containing building materials prior to any building renovation or demolition project. The inspection must be conducted by a person accredited in the identification of asbestos-containing building materials.

If asbestos is found during the inspection and will be disturbed during any renovation or repair work, it must be properly removed and disposed of at an approved disposal facility.

Likewise, all asbestos must be removed prior to any building demolition project. In most cases, asbestos abatement activities must be performed by a licensed abatement contractor.

Lists of certified asbestos inspectors, licensed abatement contractors, and approved disposal facilities are maintained by the N.H. Department of Environmental Services.

RSA 141-E and the N.H. Code of Administrative Rules establish certain requirements for licensing abatement contractors and to properly address and abate asbestos hazards.

Notification

Each facility owner must provide written notification to the Department of Environmental Services and the local health officer at least ten working days before any building demolition activity occurs. This notification is required for all building demolition projects, regardless of the amount of asbestos present, even when no asbestos is present.

For renovation projects, written notification is required at least ten working days prior to any asbestos abatement performed as part of the renovation if the abatement involves greater than 10 linear feet, or 25 square feet of asbestos-containing building material. No notification is required for renovations if the amount of asbestos-containing material is less than this, or if there is no asbestos-containing material present that will be disturbed during the renovation.

A special Demolition/Renovation

Notification Form must be used for the written notification to the Department of Environmental Services. A fee may be required depending on the amount of asbestos being removed.

TO: N.H. Code Enforcement Officers

RE: Asbestos Control Rules, Information Package

Enclosed is a New Hampshire Department of Environmental Services (DES) information package regarding asbestos control, specifically the requirements that apply to building demolition and renovation. The package includes: a brochure and fact sheet on the requirement for an inspection and notification prior to demolition or renovation; a list of asbestos containing materials; a notification form; and lists of asbestos inspectors and removal contractors.

As a Code Enforcement Officer, you may be responsible for issuing building and demolition permits. We need your assistance in educating the public (owners, applicants and contractors), particularly home/building owners, plumbers, demolition contractors, and remodelers who are affected by these rules. They should be made aware of the following parts of the Asbestos Control Rule:

Env-A 1804.01 **INSPECTIONS**. This part requires that an inspection be conducted for the presence of asbestos containing materials in the affected parts of the structure, prior to demolition or renovation. The inspection must be conducted by a person qualified in the identification of potential asbestos containing materials, and who has completed and Asbestos Inspector course. See the attached consultant list.

Env-A 1803 **NOTIFICATION**. If asbestos is found and will be disturbed by the renovation, it must be removed. Depending on the quantity of asbestos involved, a written notification may be required to the DES, and the city/town health officer. This must be done ten working days in advance of the removal. A notification form is included. **Please note that this notification is required for all building demolitions, even when no asbestos is present.**

What can you do to help us inform the public?

As the Code Enforcement Officer, you can provide guidance to owners, applicants and contractors to make them aware of these requirements during the application process. This can be accomplished by providing copies of the information, or directing them to the DES web at <http://www.des.state.nh.us/organization/divisions/air/cb/ceps/ams/index.htm>.

Additional steps can be taken to update permit applications to require the owner, applicant or

contractor to provide the city/town with a copy of the asbestos inspection and the completed DES notification.

I am available to discuss this further at your convenience. Please do not hesitate to email me at Stephen.Cullinane@DES.nh.gov, or call me at (603) 271-1373, if you have any questions, need more information or wish to meet with me.

Sincerely,

Steve Cullinane
Asbestos Program Manager
Air Resources Division

**ASBESTOS ABATEMENT
INSPECTION AND NOTIFICATION REQUIREMENTS
Asbestos Management Program- Air Resources Division**

Background.

Asbestos is a naturally occurring, mineral fiber, which due to its high tensile strength and insulating qualities, was used in the manufacture of thousands of products. Many of these products were used in the construction of buildings, including insulations, surfacing materials, flooring, siding, and roofing. Asbestos fibers however, are a human carcinogen, and their use has been strictly controlled since the 1970's.

The greatest potential for exposure to asbestos fibers now occurs when asbestos containing building materials (ACBM) are disturbed during either building renovations or demolition. RSA 141-E and Chapter Env-A 1800, Asbestos Management and Control Rules were promulgated to address this potential hazard, and they require that building owners and contractors take certain steps to identify and address asbestos hazards in structures prior to beginning any work that might disturb asbestos containing materials.

Specifics.

Inspections. Env-A 1804.01 requires that a thorough inspection be conducted for the presence of asbestos containing building materials(ACBM), prior to any demolition or renovation, in the affected portions of the facility. The inspection must be conducted by a person competent in the identification of ACBMs. A list of qualified inspectors can be obtained by calling the NH DES Asbestos Licensing Program at 603-271-4609.

Notifications. Env-A 1803 requires each facility operator to provide written notification to the NH DES Air Resources Division, and the local health officer, at least ten (10) working days before any demolition activity occurs, regardless of the amount of asbestos present, if any.

Written notification is also required ten days prior to any asbestos abatement activity conducted as part of a renovation, if it involves greater than 10 linear feet, or 25 square feet of ACBM. A fee may be required depending on the amount of asbestos being removed. Notification forms can be obtained by calling the Air Resources Division, Asbestos Program, at 603-271-1370, or from the DES website at www.des.nh.gov.

ASBESTOS MANAGEMENT AND CONTROL PROGRAM

Asbestos Containing Materials

Note: The following list does not include every product/material that may contain asbestos. It is intended as a general guide to show which types of materials may contain asbestos.

Sample List of Suspect Asbestos-Containing Materials

- Cement Pipes
- Cement Wallboard
- Cement Siding
- Asphalt Floor Tile
- Vinyl Floor Tile
- Vinyl Sheet Flooring
- Flooring Backing
- Construction Mastics (floor tile, carpet, ceiling tile, etc.)
- Acoustical Plaster
- Decorative Plaster
- Textured Paints/Coatings
- Ceiling Tiles and Lay-in Panels
- Spray-Applied Insulation
- Blown-in Insulation
- Fireproofing Materials
- Taping Compounds (thermal)
- Packing Materials (for wall/floor penetrations)
- High Temperature Gaskets
- Laboratory Hoods/Table Tops
- Laboratory Gloves
- Fire Blankets
- Fire Curtains
- Elevator Equipment Panels
- Elevator Brake Shoes

- HVAC Duct Insulation
- Boiler Insulation
- Breaching Insulation
- Ductwork Flexible Fabric Connections
- Cooling Towers
- Pipe Insulation (corrugated air-cell, block, etc.)
- Heating and Electrical Ducts
- Electrical Panel Partitions
- Electrical Cloth
- Electric Wiring Insulation
- Chalkboards
- Roofing Shingles
- Roofing Felt
- Roll Roofing
- Roof Patching Cement
- Base Flashing
- Thermal Paper Products
- Fire Doors
- Caulking/Putties
- Adhesives
- Wallboard
- Joint Compounds
- Vinyl Wall Coverings
- Spackling Compounds

Asbestos Demolition/Renovation Notification Form

Questions: (603) 271-1370, Steven Cullinane

Form Revised 11-01-08

INSTRUCTIONS

Waiver #: Indicate **Emergency Renovation/Demolition Project** number assigned by DES (271-1370).

Check whether this is a new notification or revision of a previous notification.

Fee Enclosed: Indicate the amount enclosed according to the following fee schedule. Make checks payable to **Treasurer, State of New Hampshire:**

- \$300.00 – For Class “N” Major projects involving at least 260 linear feet (lf), 160 square feet (sf), or 35 cubic feet (cf)
- \$50.00 – For Class “S” Major projects involving greater than 10 linear feet (lf), 25 square feet (sf), or 3 cubic feet (cf) but less than 260 lf, 160 sf, or 35 cf
- \$25.00 – Each Revision
- \$0.00 – Projects up to 10 lf, 25 sf, or 3 cf

1. Owner of property information.
2. Abatement contractor information (or Demolition contractor information in the case of a demolition project with no asbestos present).
3. Building name and address (for example, Jones Residence or Widgets Inc., factory).
4. Check the type of project. For Emergency Demo/Reno, obtain waiver # from DES and indicate on line provided at top of form.
5. Building description. If exact information not available, provide an estimate.
6. ACM — List known quantity of Asbestos Containing Material present in building and quantity to be abated.
7. Start and End dates of abatement work or demolition, including hours of operation and days of week.
8. Location in building of ACM to be abated, example: boiler room or 3rd floor hallway.
9. Licensed Asbestos Abatement Supervisor.
10. & 11. Transporter name and address, and final disposal site for ACM waste.
12. Brief description of work practices to be employed to comply with applicable rules and regulations, example: full containment, negative pressure, wet methods.
13. Name of inspector for demolition and large renovations where ACM isn't assumed to be present.
14. Brief description of unusual work practices, example: “dry removal around electrical gear” or “modified containment with full decon of contaminated basement.” Attach written waiver where required.
15. Government Agency, including responsible person, if an ordered demolition.
16. Certification. Provide signature of responsible person and date.
