Discussion with Doug Martin from W.H. Demmons, Inc  
Subject: Heating the Basement of the Old Town Hall.

A discussion took place centered on the work need to provide heat to the basement of the Old Town Hall. The purpose of providing heat (40 to 45 degrees) to the basement area is so the newly installed water pipe will not freeze. Several solutions were discussed.

A motion was made by Norman DeBoisbriand to have W.H. Demmons do a small amount of duct work, disconnecting some duct work that supplies upper floor and redirecting it to lower floor. W.H. Demmons will then be authorized to start the boiler to provide heat to the lower level of the old town hall. The motion was seconded by Peter Merrill.
